

Amendments to and Listing of the Claims

Please amend claims 1 and 3 so that the claims read as follows:

1. (currently amended) An electrochemical element comprising: an element unit in which a positive electrode and a negative electrode are disposed to face each other with a separator therebetween; an electrolyte in contact with said element unit; a metal case for accommodating said element unit and said electrolyte; a sealing body for sealing an opening of said metal case; and a sealant provided between said metal case and said sealing body, characterized in that said metal case and said sealing body are disposed on opposite surfaces of said sealant and said sealant is in direct contact with said metal case and said sealing body, and said sealant comprises an elastomer as a main component and an organic pigment and is colored in a color different from said metal case and sealing body.

2. (original) The electrochemical element as set forth in claim 1, wherein said organic pigment is an organic pigment composed of a phthalocyanine-based metal complex.

3. (currently amended) An electrochemical element comprising: an element unit in which a positive electrode and a negative electrode are disposed to face each other with a separator therebetween; an electrolyte in contact with said element unit; a metal case for accommodating said element unit and said electrolyte; a metal sealing plate for sealing an opening of said metal case; a gasket interposed between said metal case and said sealing plate; and a sealant provided between said gasket and said metal case or said sealing plate, characterized in that said sealant is in direct contact with said gasket and with said metal case or said sealing plate, and said sealant comprises an elastomer as a main component and an organic pigment and is colored in a color different from said metal case, gasket and sealing plate.

4. (original) The electrochemical element as set forth in claim 3, wherein said organic pigment is an organic pigment composed of a phthalocyanine-based metal complex.

5. (previously presented) The electrochemical element as set forth in claim 1, wherein said organic pigment has chemical affinity for the elastomer and is evenly dispersed in the sealant.

6. (previously presented) The electrochemical element as set forth in claim 1, wherein said organic pigment provides an even color in the sealant.

7. (previously presented) The electrochemical element as set forth in claim 3, wherein said organic pigment has chemical affinity for the elastomer and is evenly dispersed in the sealant.

8. (previously presented) The electrochemical element as set forth in claim 3, wherein said organic pigment provides an even color in the sealant.
